### **DETAILED ACTION**

*Claims 17 and 18 are allowed.*

#### ***Response to Arguments***

Applicant's arguments, see Remarks, filed 4/11/2008 with respect to claims 17 and 18 have been fully considered and are persuasive. The 35 USC 102(b) rejection of pending claims has been withdrawn. With the submission of the terminal disclaimer the double patenting rejection has been withdrawn.

#### ***Reasons for Allowance***

The prior art of record fails to teach neither singly nor in combination, the claimed limitation of "contents of an operation menu are transferred based on an operation input received in response to the operation menu being selected" and "a group of independent software objects" that are "to display the operation menu and to transfer the contents of the operation menu in response to the operation menu being selected"

More specifically regarding claim 17 and 18, the prior art fails to explicitly teach the claimed feature of "an operation software object separate from the menu flow software object and functioning in cooperation with the menu flow software object to control processing of the operation input by the processor and to create, change and delete the input operation.

As discussed in Applicant's Remarks filed 4/11/2008, in conjunction with other limitations in the independent, are not specifically disclosed or remotely suggested in

the prior art of record. A review of claims *17 and 18* in view of the examiner's remarks above, indicates that claims *17 and 18* are allowable over the prior art of record.

Any comment considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent 5574843 discloses analyzing the received data structure to determine an action to be performed in response to the action identifier of the data structure, and performing the action corresponding to the action identifier in accordance with a plurality of the attributes of the received data structure.
